

SAP Variant Configuration

A powerful out of the box SAP solution for customers who design and produce products that can be manufactured in many different configurations

SAP Variant Configuration supports the manufacturing of complex products that can be configured dynamically by selecting product options to build the desired purchasable product. Rather than predefining all possible product configurations, SAP VC allows you to create a SuperBOM (or 200% BOM) of all the options available from which a customer or sales person can select. The selection process uses intelligence or what is called Object Dependencies based on rules that allow for the proper selection of related product options. A sales order links the desired product configuration by which components are planned and assembled or manufactured for shipment to the customer. SAP VC is offered in SAP ECC Business Suite and SAP S4/HANA.

Variant Configuration can also be integrated and used with SAP's new Product Structure Management (PSM) solution which provides engineers a true top down design process where a simple PSM structure can be enhanced with existing BOMs and Document Structures integrating CAD models, visuals, Materials, and BOMs all under configuration control.

SAP Variant Configuration customers include:

- Aircraft manufacturers delivering varied plane configurations
- Automotive Manufacturers offering varied car and truck options
- Heavy equipment manufacturers offering custom vehicle sizes and options
- Tractor manufacturers offering varied bolt-on tool options
- Defense manufacturers engineering varied systems variations
- Military with varied equipment configurations
- Food and beverage producers offering varied product options

LeverX - SAP Variant Configuration Consulting Practice

LeverX provides a full service SAP Variant Configuration consulting practice for both SAP ECC Business Suite and S4/HANA customers. We can assist your company to assess the strategic and business value of adopting or expanding your use of SAP Variant Configuration.
